United Brotherhood of Carpenters and  
Joiners of America

### ARCHITECT

Gensler

### INSTALLER

Kalkreuth Roofing and Sheet Metal

### PROJECT TYPE

Historic Restoration

### SCOPE OF WORK

Overly Batten B System  
1,435 square feet of 18-gauge aluminum panels, finished  
in bone white

### PROJECT IN REVIEW

With commanding views of the U.S. Capitol, 101 Constitution Avenue NW has long been a Capitol Hill landmark. In 2025, the building underwent a rooftop transformation, replacing a tent-covered terrace with a permanent, architecturally striking structure.

Gensler and DPR Construction partnered with OVERLY Panel Systems by East Coast Metal Systems to deliver this vision using 1,435 square feet of 18-gauge bone white aluminum panels. The result is a refined, functional space that reflects the building's status and enhances its skyline presence.

This project exemplifies how metal—when applied with precision and purpose—can elevate architecture both literally and figuratively. At 101 Constitution Avenue NW, the future of metal architecture now shines from the rooftop.
